
Captures by Wind Stage and Arm. Note. Capture = truth and perception both inside M3b for 3.0 s (the “Decision Rules” section). Solid lines and hollow markers = the arms with the 0.25 m offset (S1O, A2O, PIDO); dotted lines and filled markers = the same controllers without it (S1, A2, PID). Thin gray capped whisker at each point (and the colored whisker at Calm Control) = two-sided 95% seed-cluster bootstrap interval of each stage rate. Dotted gray line = 35% reference floor (pooled rate; reported, not a hypothesis).
