

H3 Statistic by Trajectory. Note. Capture = truth and perception both inside M3b for 3.0 s (the "Decision Rules" section). Marker = each arm's same-seed decrease in docking-envelope captures from light (σ = 0.25) to moderate (σ = 0.35) turbulence; whisker = its two-sided 95% seed-cluster bootstrap interval. The rates above each marker are the arm's capture rates on that trajectory at the two levels; the value below it is the decrease. Dotted green line = 35 pp. Hollow marker = with the 0.25 m offset; filled = without. Each panel holds one DHC-2 trajectory, nine wind stages pooled, 270 legs or same-seed pairs per arm. No trajectory panel is graded; the hypotheses are graded on both trajectories pooled. Amplifying; decides no hypothesis.
